

Pole Mount Solution

The Hopergy Pole Mount System is the perfect solution when maximum flexibility is required in the installation.

Any number of poles can be installed to grow the system. Poles can be rotated to the optimum orientation, and the array of panels on each pole can be turned to any one of five angles: 10, 20, 30, 40 or 50 degrees to maximise power generation.

The Hopergy Pole Mount System is ideal where:

- mounting space is restricted,
- multiple mounting points would require expensive ground levelling,
- impact on the site surface must be minimised,
- convenient working height is a priority,
- access is required beneath the PV array, and
- maximum flexibility is needed in locating PV arrays.

HOP PM 04

Pole Mount for 4 Panels

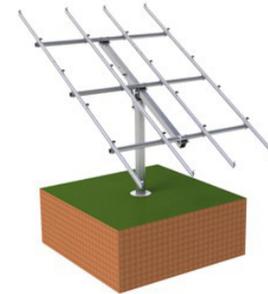

HOP PM 06

Pole Mount for 6 Panels

HOP PM 08

Pole Mount for 8 Panels

HOP PM 10

Pole Mount for 10 Panels

Flexible, Reliable, Free-Standing

A single, free standing support pole can accommodate 4, 6, 8 or 10 panels. The Pole Mount is just the right application for mounting solar water pumping system in remote areas, as well as an alternative choice for residential open field, medium commercial solar project installation.
